OPTIVER-TRADING AT THE CLOSE

DIVYAMAN SINGH RAWAT

TABLE OF CONTENTS

PROJECT OBJECTIVE

- "In this competition, you are challenged to develop a model capable of predicting the closing price movements for hundreds of Nasdaq listed stocks using data from the order book and the closing auction of the stock. Information from the auction can be used to adjust prices, assess supply and demand dynamics, and identify trading opportunities."

CHECK FOR STATIONARITY - 1

- **Condition 1**: -The mean must be constant and not vary with time.

CHECK FOR STATIONARITY - 2

- **Condition 1**: -The mean must be constant and not vary with time.
- **Condition 2**: - The variance must be constant and not vary with time.

CHECK FOR STATIONARITY - 3

- **Condition 1**: -The mean must be constant and not vary with time.
- **Condition 2**: - The variance must be constant and not vary with time.
- **Condition 3**: -There must be no periodicity in the data.

OBSERVATIONS & CONCLUSIONS - 1

- The MAD achieved on the test data is an improvement over the MAD achieved by the winning team on the Kaggle competition.
- Further experimentation needed:-
  - Alternative models
  - Additional features

OBSERVATIONS & CONCLUSIONS - 2
